## 4K ULTRA HD

K5 innovates with the Sony 8-megapixel sensor on the front camera, producing spectacular **4K Ultra HD** footage at 30 FPS.

\*The rear camera features a Sony sensor, providing crisp and clear 1080P HD

## Stylish Appearance & IP67 Rated

The device is constructed of durable and lightweight aerospace aluminium alloy. It is also certified with an IP67 rating, meaning that it could withstand rain, snow and dust. There is no doubt that the INNOVV K5 Powersports Cam will perform well even in the harshest weather conditions.

## Smart Remote Control

You could conveniently check the Wi-Fi, DVR and GPS working status with the LED indicators on the Remote Control during your road trip without taking your hands off the handlebar and eyes off the road.

## External Mic

INNOVV K5 Powersports Cam adopts an external Mic instead of an internal Mic, upgrading the audio quality from a tinny sound to a resonating voice. It clearly records your voice during any road trip by attaching it to the helmet, making it helpful for moto-vlogging. What's more, it can record engine or exhaust sounds by placing it in the right place.

## Auto On/ Off Recording Technology

All INNOVV Powersports Cam are designed to operate in an "install & forget" manner. As soon as the ignition is turned on, the INNOVV Powersports Cam will start to record automatically. When the ignition is turned off, the INNOVV Powersports Cam will perform an automatic shutdown process.
